San Jose, California. 1 December 2009

Pavilion Integration Corporation (PIC) announces the opening of its new facility in SuZhou China, close to the City of Shanghai. While the company will maintain a full manufacturing and design capability in San Jose California, which will continue to be a center of new application and technology development, the volume OEM production is moving to a state of the art clean room facility in SuZhou. Unlike most laser companies that have shifted much of their manufacturing to remote offshore subsidiaries and contract manufacturers – exporting critical skills and technology; PIC already has its roots in a Global strategic alliance of engineering and technology development teams that work together to bring quality products to market.

“We are planning to leverage the strong relationships we have in China, Europe and the US to build a global presence. The SuZhou team will certainly expand its role in the company over the next few years as the market in China grows – but the primary applications development will continue to be in the US and Europe for some time yet” says PIC CEO NingYi Luo. Having dual manufacturing sites offers a degree of supply chain continuity – addressing the planning and risk mitigation practices of many key OEM customers.

PIC continues to develop a full range of Diode based lasers with wavelengths from 375nm to 1500nm in both free space and fiber coupled architectures. Using the most advanced developments in diode laser technology coupled with the WhisperIT® noise suppression technology, PIC lasers set the standard in the industry for low noise instrumentation lasers.

Visit our Website at www.pavilionintegration.com for additional information on PIC and our exciting range of OEM lasers.
